

Cancer Screening And Detection Manual For Nurses

Table 4. False-Positive and Surgical Harms Reported in Ovarian Cancer Screening Trials (Key Question 2)^a

Source	Quality ^b	False-Positive Screening Rate Across Entire Program, No. With False-Positive Screen/No. Without Cancer (%) ^c	Screening Test Complications	False-Positive Surgery, No. Undergoing Surgery/No. Without Cancer (%)	Women Without Cancer With Surgical Complications, No. With Complication/No. With False-Positive Surgery (%) ^d
UKCTOCS, 2016 ^{27,31,34} (CA-125 ROCA)	Good	20/340(46/067 (44.2) across 2-11 rounds of screening ^e	0.86 per 10 000 screens ^f	408/50 270 (0.97)	15/408 (3.07) ^g
UKCTOCS, 2016 ^{27,31} (TVU)	Good	NR ^h	1.86 per 10 000 screens ^f	1634/50 299 (3.25)	57/1634 (3.49) ^g
PLCO, 2011 ^{10,22,27}	Good	3285/34 041 (9.6) across 1-6 rounds of screening	CA-125: 58.3 per 10 000 women ^h TVU: 3.3 per 10 000 women ^h	1080/34 041 (3.17)	163/1080 (15.09) ⁱ
UK Pilot, 1999 ³³	Good	462/10 942 (4.2) across 1-3 rounds of screening ^h	NR	23/10 942 (0.2) ^m	0
QUEST, 2007 ²⁹	Fair	NA	NA	NA	NA

Abbreviations: CA-125, cancer antigen 125; NA, not applicable; NR, not reported; PLCO, Prostate, Lung, Colorectal and Ovarian cancer screening trial; TVU, transvaginal ultrasound; UKCTOCS, UK Collaborative Trial of Ovarian Cancer Screening

^a Includes ovarian, fallopian, and primary peritoneal cancers.

^b Methodological quality of each study using predefined criteria developed by the US Preventive Services Task Force.¹²

^c Patient experience of first positive screening test result leading to additional triage or follow-up (including repeated testing because of unsatisfactory results).

^d Among women with false-positive results (benign findings) who underwent surgery.

^e The false-positive rate from the baseline screening round was 5.0% (453/50 031). False-positives from baseline screening could not be combined with rates from screening rounds 2 to 11 because of differences in denominators. Cumulative data reported for women screened in rounds 2 to 11 were based on a denominator of women who continued screening after the first round.

^f Includes bruising (13), pain (8), hematoma (3), fainting (1), cystitis/infection (1), other (4).

^g Includes anesthetic complications (1), injury to hollow viscus (2 gastrointestinal, 1 bladder), hemorrhage (2), deep vein thrombosis (1), bowel obstruction (4), wound breakdown (1), significant ileus (1), uterine perforation (1), infection (1).

^h Data reported only for prevalence round: 11.9% (5734/48 177).

ⁱ Includes pain (20), cystitis or infection (11), discomfort (5), bruising (2), fainting (1), other (22).

^j Includes injury to hollow viscus (4 gastrointestinal, 3 bladder, 1 ureter), hemorrhage (11), anesthetic complication or myocardial infarction (3), hernia (6), deep vein thrombosis or pulmonary embolism (3), wound breakdown (6), bowel obstruction (4), wound or supravaginal hematoma (4), infection (6), pain with readmission or further operation (3).

^k Minor complications (eg, fainting, bruising).

^l Total of 222 complications in 163 patients. Includes infection (89), direct surgical harms (63), cardiovascular or pulmonary events (31), other (39).

^m Does not include peritoneal cancers.

from breast cancer can be made through screening and early screening, detection, and diagnosis. The nurse must build awareness and understanding of breast cancer risk; refute .. Screening and Detection Manual for Nurses. New York. IARC Screening Group - A digital manual for the early diagnosis of oral neoplasia 24 JUNE -- Oral cancer is an important public health problem It is intended for use by medical practitioners, nurses and health.2 Advanced Oncology Nursing Certification Review and Resource Manual (Second Edition) lines.
